

The skin will feel rubbery and slippery and can feel tender and a little sunburnt in some cases. You may also experience some tingling and stinging with the application of the DMK serums and crèmes. This is to be expected and is normal.

48 HOURS POST-TREATMENT:

- » **Avoid excess sweating, heat or sun exposure.** You may also experience some post-treatment sensations, which are common. You may experience some redness or dryness.
- » You may also experience some superficial scabs. This is a normal response as it is a form of the remodelling process. It is important **NOT to pick** to avoid scarring or hyperpigmentation.
- » It is normal to experience a rush of oil as there is no longer any hair for the sebum secretion to stick to.

DAYS 3-5 POST-TREATMENT:

- » A slight sandpaper effect may be present on the surface of the skin.
- » We recommend to use your at-home exfoliation; Micropeel, or for best results your Foamy Lift & Exoderma.

HOMECARE - MORNING AND NIGHT FOR 7 DAYS POST-TREATMENT:

- » **Cleanse with your home prescriptive cleanser** as recommended by your Skin Correctives therapist.
- » Apply **1 pump of Betagel** and **1 pump of Direct Delivery Vitamin C.**
- » Apply **2-3 drops of Seba E / Herbal Pigment Oil** and **3-4 sprays of Herb & Mineral Mist.**
- » Apply **1 pump of Contraderm.**
- » Apply Your Skin Correctives **recommended SPF** everyday.

You may need to use some additional products suitable for your skin type and condition, and as prescribed by your Skin Therapist.
