

**WHAT YOU NEED TO KNOW:**

- » Warmth, redness, and swelling (follicular erythema) around treated areas may occur and can last up to 24 hours. It is a normal reaction, not an infection.
- » Hot and humid weather conditions can aggravate skin in the period immediately after treatment.
- » **DO NOT use ice packs** to cool the skin. Over-cooling the skin can cause an inflammatory response, resulting in burns. If needed, use a cool cloth only.
- » Hair that has responded to treatment will continue to move up the follicle and can surface for 2 – 3 weeks after the treatment; this is NOT new hair growth. We recommend a loofah or body exfoliant to remove the hair, one week post-treatment.
- » Crusting may occur in some areas; this is normal and will not scar, provided you **DO NOT pick or scratch at all**. Be gentle with the skin until it is completely healed.
- » **Apply Solar Damage Gel each morning and night** to the treated area.
- » **Apply your SPF daily.**
- » **DO NOT expose the treated area(s) to the sun** for 6 weeks.
- » Multiple treatments are necessary and are generally recommended every four weeks, or as advised by your Skin Correctives therapist.
